3	Snehil Dhiman	Events & Student Profile
4	Rishav Thakur	Campus Map & SQLite Database

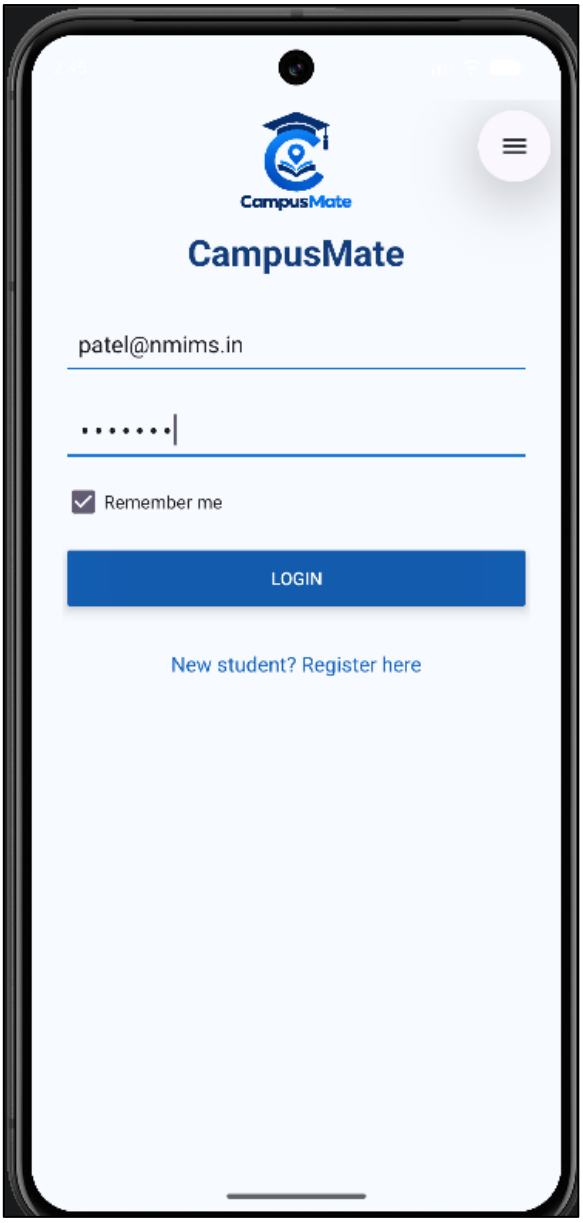

Project Overview

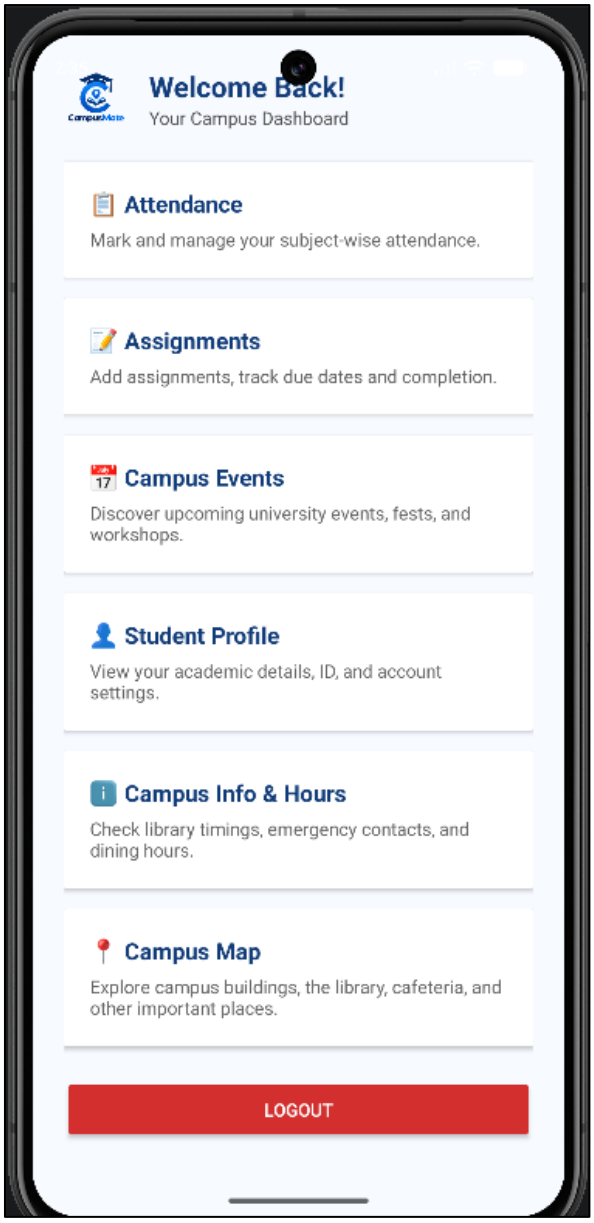

CampusMate is a student campus app designed specifically for Android devices in order to allow students access to significant academic and campus-related data in a single platform. This app aims at making the everyday life of students easier by combining many significant operations into one single convenient tool. Some of the features offered by this app are the login module, the home screen and attendance module, events, student's profile management, and the campus map, allowing students to find important places on the campus.

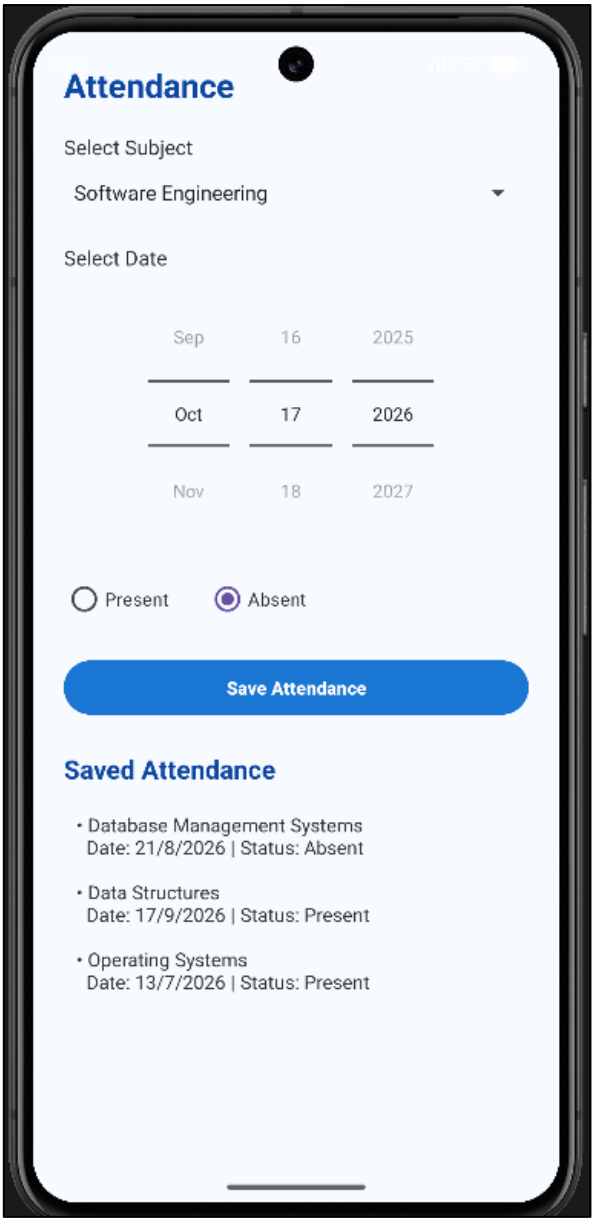

The application is built in **Java** language. The data management solution used is **SQLite**, ensuring the proper storage of structured information such as the data on students and their attendance. The application uses file handling mechanism as well as the integration of **Google Maps** and relevant Android programming concepts, such as activity communication and interaction. Overall, the goal of the *CampusMate* application is to provide students with simple and organized digital platform improving their access to campus information.
